Ovarian Cancer: Second Edition (Cancer Treatment and Research)

Ovarian Cancer: Second Edition (Cancer Treatment and Research)

Ovarian carcinoma continues to be responsible for more deaths than all other gynecologic malignancies combined, due to a continued inability to achieve detection of early (rather than advanced) stage disease and the lack of effective tumor-specific therapeutics.

Ovarian carcinogenesis, invasion, and metastatic dissemination require a complex cascade of interrelated genetic, molecular, and biochemical events that regulate the neoplastic transition of normal ovarian surface epithelium.

This updated second edition includes exciting new advances in ovarian cancer detection and treatment and provides an analysis of current research into aspects of malignant transformation, growth control, and metastasis. A more detailed understanding of these processes may ultimately translate into the development of novel approaches for the detection and control of ovarian cancer.
