Practical Batch Process Management Mike Barker B.Sc (Elec.Eng), Jawahar Rawtani M.Sc(Tech) MBA
Historically batch control systems were designed individually to match a specific arrangement of plant equipment. They lacked the ability to convert to new products without having to modify the control systems, and did not lend themselves to integration with manufacturing management systems.
Practical Batch Management Systems explains how to utilize the building blocks and arrange the structures of modern batch management systems to produce flexible schemes suitable for automated batch management, with the capability to be reconfigured to use the same plant equipment in different combinations.
It introduces current best practice in the automation of batch processes, including the drive for integration with MES (Manufacturing Execution System) and ERP (Enterprise Resource Planning) products from major IT vendors. References and examples are drawn from DCS / PLC batch control products currently on the market.

- Implement modern batch management systems that are flexible and easily reconfigured
- Integrate batch management with other manufacturing systems including MES and ERP
- Increase productivity through industry best practice
